

# Reflection on PC Assemble Lab

Course: Technology and Information System (SECP1513-07)

Name: Raden Salma Humaira binti Muhammad Mun'im

No. Matric: A23S0264

Lecturer: Ts. Dr. Sarina binti Sulaiman

## Reflection

I have never tried to dismantle the PC before, since the core teaching of computer science at my school was focused on theory only, so this experience of disassembling and assembling the components of PC such as the power supply, RAM, HDD and the CPU fan has taught me to meticulously treat these parts as its own. They do not comply with the same rules with the other components. The wiring must be connected to its corresponding ports, and must not be arbitrarily linked even if the shapes of the components fit one another. Out of context but if we interact with people we have no chemistry with, we would also feel alienated. Another lesson that I have learnt is that teamwork and communication is key in any group work. I somehow left the heavy duty task to the others because I was afraid to break any of the fragile components (eg: PC case, RAM) and my teammates understood, so I compensated for it by screwing the components in place. To sum it up, it was a hectic yet enlightening experience to understand this course even more!
